

# 1 Message Bubbles

Displays message bubbles as a conversation in LaTeX.

## 1.1 License

The LaTeX project public license (lppl).  
More under <http://www.latex-project.org/lppl/>.

## 1.2 Detailed description

This LaTeX package allows to display a tuple of text and datetime as a message bubble. A conversation between two persons can be printed as each message bubble has to be either ragged to the right or left of a page.

## 1.3 In Action

Message Bubbles are used in the following way

```
\messagebubbleleft{01.01.2011 14:23}{This is my text}  
\messagebubbleright{01.01.2011 14:25}{This is another text}
```

results in the following boxes

This is my text  
*01.01.2011 14:23*

This is another text  
*01.01.2011 14:25*

which denote the messages as bubbles.
